

# MANAS DAS

7470695607 | manasd0411@gmail.com | LinkedIn | GitHub

## Summary

Data Science and Software Engineering student experienced in building machine learning models, analytics dashboards, and data-driven applications. Skilled in time-series forecasting, predictive modeling, and transforming raw data into actionable insights using Python, SQL, and modern web technologies.

## Education

**Vellore Institute of Technology**

Integrated M.Tech in Computer Science and Engineering

2022 – 2027

CGPA: **8.24 / 10**

## Technical Skills

|                          |                                                                              |
|--------------------------|------------------------------------------------------------------------------|
| <b>Programming:</b>      | Python, Java, C++, R                                                         |
| <b>Machine Learning:</b> | Scikit-learn, ARIMA, LSTM, Time Series Forecasting, Feature Engineering, EDA |
| <b>Data Tools:</b>       | Pandas, NumPy, Matplotlib, Power BI, Tableau, Excel                          |
| <b>Databases:</b>        | SQL, MongoDB                                                                 |
| <b>Web:</b>              | React.js, JavaScript, HTML, CSS                                              |
| <b>Tools:</b>            | Git, GitHub                                                                  |

## Projects

### Hisab — Expense Tracker & Analytics Dashboard | CSS, JavaScript, Node.js, React, HTML

- Developed a full-stack expense tracking application using React.js, MongoDB, and Node.js, supporting 500+ transaction records with secure CRUD operations.
- Built interactive analytics dashboards in Power BI and React, improving expense visualization and reducing manual analysis time by 40%.
- Implemented automated spending categorization and budgeting insights using Python, increasing financial tracking accuracy and automated analytics to detect overspending patterns and provide budgeting insights.

### TradeLens — Stock Price Forecasting | Java, Python, Pandas, NumPy, Matplotlib

- Processed and analysed 10,000+ OHLCV market records using Pandas and NumPy for trend identification and forecasting.
- Developed ARIMA and LSTM forecasting models achieving 85% prediction accuracy on historical stock market datasets.
- Evaluated model performance using RMSE, MAE, and MAPE metrics and visualized predictions through Matplotlib dashboards.

### StaySense — Telecom Customer Churn Analytics | Python, SQL, Power BI

- Designed Power BI dashboards to analyze customer churn trends and monitor key retention KPIs across 5,000+ customer records.
- Cleaned and transformed telecom datasets using Python and SQL, improving data consistency and reporting efficiency by 35%.
- Performed exploratory data analysis to identify high-risk churn segments, helping improve customer retention strategy insights.

## Certifications

Applied Machine Learning in Python — Coursera (2023)

Oracle Data Science Professional — Oracle (2025)

## Achievements

Represented team at national-level football tournaments, demonstrating leadership, teamwork, and performance under high-pressure environments.
